INTRODUCTION

This booklet contains a listing of 24 hour traffic volume counts taken at the major intersections and significant mid-blocks within the City of Shreveport. The counts are listed in alphabetical order. We have included for each intersection or mid-block the latest count plus all previous counts that are available.

The first column of the counts gives the month and the year that the count was taken. The next column denotes whether the location is an intersection or a mid-block.

The location of the count is given with the street that comes first in the alphabetical list. An exception to this is a mid-block count where the street that was counted is listed first and the nearest intersection street is located second.

The counts are listed in direction of travel (i.e. a southbound count would be traffic coming from the north, going south, etc.). The final column is the total of all directional counts on that date.

Shreveport Traffic Engineering has attempted to provide a traffic count book that is both convenient and useful to the public. Any comments or suggestions should be transmitted to:
